SECTION 1
PURPOSE OF COMPLIANCE TEST

The tests performed are part of a program conducted for the National Highway Traffic Safety Administration (NHTSA) by MGA Research Corporation (MGA) under Contract No. DTNH22-03-D-11002. The purpose of this test was to determine whether the subject vehicle, a 2004 Volkswagen Beetle Passenger Car, NHTSA No. C45802, meets certain performance requirements of FMVSS 208, "Occupant Crash Protection"; FMVSS 212, "Windshield Mounting"; FMVSS 219, "Windshield Zone Intrusion"; and FMVSS 301, "Fuel System Integrity". The compliance test was conducted in accordance with OVSC Laboratory Test Procedure No. TP208-12 dated January 14, 2003.

DISCUSSION OF TESTS

Test Vehicle: 2004 Volkswagen Beetle
Test Program: FMVSS 208 Compliance

NHTSA No.: C45802
Test Date: 3/18 - 8/20/04

The label on the dash or steering wheel hub was not present at the time of the belt and label evaluation, but it may have been misplaced after receiving the vehicle at the test facility. Therefore FMVSS 208 S4.5.1(e)(2) is neither a pass nor fail.

The Tire Placard label is the subject of NHTSA recall number 03V508000. The Tire Placard label incorrectly identifies the vehicle as a five passenger vehicle instead of a four passenger vehicle. The information recorded below is as it appeared on the vehicle tire placard.

Designated Seating Capacity Front:	2
Designated Seating Capacity Rear:	3
Total Designated Seating Capacity:	5

The information recorded below is as it should appear on the vehicle tire placard. The test was performed using this data.

Designated Seating Capacity Front:	2
Designated Seating Capacity Rear:	2
Total Designated Seating Capacity:	4

A blanket and visor were not used in the suppression testing because they did not affect the weight sensing system used on the vehicle.

The Cosco Dream Ride Car Bed was tested for suppression in the Forward, Middle, and Rearward Seat Slide positions. Its orientation was lateral with the Newborn dummy's head placed to the left hand side of the vehicle

The passenger air bag for the 6-year-old Position 2 Low Risk Deployment on 7-9-04 was replaced on site by Volkswagen personnel under the direction of a NHTSA representative.

Due to 6-year-old dummy availability SN 153 was used for Position 1 and Position 2 Low Risk Deployments on 7-9-04. Only one pretest and one posttest dummy calibration was performed.

☐ N/A, no seat adjustment
- ☐ 8. Draw a horizontal line on the side of the seat cushion.
- ☐ 9. Using only the controls that change the seat in the fore-aft direction, mark the fore-aft seat positions. Mark the side of the seat and a reference position directly below on a part of the vehicle that does not adjust. For manual seats, move the seat forward one detent at a time and mark each detent as was done for the full rearward position. For power seats, mark only the full rearward, middle, and full forward positions. Label three of the positions with the following: F for full forward, M for mid-position (if there is no mid position, label the closest adjustment position to the rear of the mid-point), and R for full rearward.

☐ N/A, the seat does not have a fore-aft adjustment.
- ☐ 10. Using only the controls that change the seat in the fore-aft direction, place the seat in the middle fore-aft position. (S8.1.2)

☐ If there is no mid position, put the seat in the closest adjustment position to the rear of the midpoint. Describe the location of the seat:

- ☐ 11. If seat adjustments, other than fore-aft, are present and the reference line is no longer horizontal, use those adjustments to maintain the reference line as closely as possible to the horizontal. (S16.2.10.3.2)

- ☐ Manufacturer's design seat back angle:
- ☐ Tested seat back angle:
- ☐ 13. If adjustable, set the head restraint at the full up and full forward position. (S8.1.3) Any adjustment of the head restraint shall be used to position it full forward. For example, if it rotates, rotate it such that the head restraint extends as far forward as possible.
- ☐ N/A – no head restraint adjustment
- ☐ 14. Place any adjustable seat belt anchorages at the vehicle manufacturer's nominal design position for a 50th percentile adult male occupant (S8.1.3)

- ☒ 14. Calculate the Rated Cargo and Luggage Weight (RCLW).
- ☒ 14.1 Does the vehicle have the vehicle capacity weight (VCW) on the certification label or tire placard?
- ☒ Yes, go to 14.3 On inside left front door frame
- ☐ No, go to 14.2
- ☐ 14.2 VCW = Gross Vehicle Weight – UVW

$$VCW = \underline{\hspace{2cm}} - \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

- ☒ 14.3 VCW = 351 kg (774 lbs)
- ☒ 14.4 Does the certification or tire placard contain the Designated Seating Capacity (DSC)?
The Tire Placard label is the subject of NHTSA recall number 03V508000. The Tire Placard label incorrectly identifies the vehicle as a five passenger vehicle instead of a four passenger vehicle. The correct four passenger data was used to perform the test. See Discussion of Tests, Section 4, Page 8, for further information.

- ☒ Yes, go to 14.6
- ☐ No, go to 14.5 and skip 14.6

- ☒ 14.8 Is the vehicle certified as a truck, MPV or bus (see the certification label on the door jamb)?

- ☐ Yes, if the calculated RCLW is greater than 136 kg, use 136 kg as the RCLW. (S8.1.1)
- ☒ No, use the RCLW calculated in 14.7

Adjustments made to the seat to position the driver will over ride any adjustments that would normally be made to position the passenger. (S16.2.10.3)

- X 2. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
X N/A – No additional support adjustment
- X 3. If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (S16.2.10.3.1)
X N/A – No independent fore-aft seat cushion adjustment
- X 4. Use the seat markings determined during the completion of Data Sheet 14 to set the rearmost fore-aft position, mid-height position and the seat cushion mid-angle. (S16.3.3.1.1)
- X 5. Fully recline the seat back. (S16.3.3.1.2)

Photo 2.4: Marking the center point in lateral direction

Transfer the marked middle points on the cover using a metal rule (Photo 2.4). The vertical plane, which intersects this point is designated as plane "D". To define plane "C", determine the center point in longitudinal direction of the air bag opening (S22.4.1.3). The cross where both lines intersect defines the geometric center point of the air bag deployment opening (Photo 2.5).
